INTERNATIONAL PRELIMINARY EXAMINATION REPORT

IV. Lack of unity of invention				
1. In response to the invitation to restrict or pay additional fees the applicant has:				
restricted the claims.				
paid additional fees.				
paid additional fees under protest.				
neither restricted nor paid additional fees.				
2. This Authority found that the requirement of unity of invention is not complied with and chose, according to Rule 68.1, not to invite the applicant to restrict or pay additional fees.				
3. This Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is				
complied with.				
not complied with for the following reasons:				
See supplemental sheet				
·				
 Consequently, the following parts of the international application were the subject of international preliminary examination in establishing this report: 				
all parts.				
the parts relating to claims Nos.				

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: IV.

Lack of Unity of Invention

- 1. This Authority has determined that the present international application contains multiple inventions that are not linked by a single general inventive concept (PCT Rule 13.1):
 - I: Claims 1, 3 to 12 and 14 to 16: Sections of a dryer through which material webs pass.
 - II: Claims 2 and 13:

 Arrangement of a heating system and air outlet openings of a material web dryer.
- 2. The reasons are as follows:

A dryer for printed material webs with a passage channel having straight sections through which the web passes meanderingly according to the features essential to the first invention in claim 1 does not necessarily include a specific arrangement of the heating system and the air outlet openings as per the features essential to the second invention in claim 2, and vice versa. A dryer according to the first invention could have any other arrangement of a heating system or could be constructed without air outlet openings, while a dryer according to the second invention could also include sections through which the web passes in a straight line, one after the other.

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: IV.

- 3. A dryer having all of the features of the identical preambles of the two independent claims, claims 1 and 2, is already known from document DE-A-4 429 891.
- 4. Contrary to the requirements of PCT Rule 13.1, there is no link between the two inventions in the form of a mutual technical relationship involving the same or corresponding special technical features in both independent claims 1 and 2.

v.	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

_				
1.	Statement			
	Novelty (N)	Claims	1-16	YES
		Claims		NO
	Inventive step (IS)	Claims	1-16	YES
		Claims		NO
	Industrial applicability (IA)	Claims	1-16	YES
		Claims		NO

2. Citations and explanations

- 1. First Invention / Claims 1, 3 to 12 and 14 to 16
- 1.1. Claim 1

1.1.1. Prior Art:

Document DE-A-4 429 891, which is cited in the description, discloses a dryer having all of the features of the preamble of independent claim 1.

1.1.2. Problem:

Providing a dryer for a material web.

1.1.3. Solution:

The specific combination of all of the features of claim 1, particularly the specific arrangement of two sections with respect to the plane determined by the vertically-passing material web according to the characterizing part of claim 1, is neither described in nor suggested by the prior art, and so the invention involves an inventive step.

1.2. Claims 3 to 12 and 14 to 16

Dependent claims 3 to 12 and 14 to 16 define advantageous embodiments of the dryer, each having all of the features of independent claim 1.

- 2. Second Invention / Claims 2 and 13
- 2.1. Claim 2

2.1.1. Prior Art:

Document DE-A-4 429 891, which is cited in the description, discloses a dryer having all of the features of the preamble of independent claim 2.

2.1.2. Problem:

Providing a dryer for a material web.

2.1.3. Solution:

The specific combination of all of the features of claim 2, particularly the specific arrangement of sections with air outlet openings in sections of the passage channel and with a heating system according to the characterizing part of claim 2, is neither described in nor suggested by the prior art, and so the invention involves an inventive step.

2.2. Claim 13:

Dependent claim 13 defines an advantageous embodiment of the dryer having all of the features of independent claim 2.
